

COURSE DESCRIPTION

The PHRN/ECRN is a healthcare professional who demonstrates an understanding of pre-hospital emergency medical services. PHRN/ECRN candidates completing this curriculum will have successfully demonstrated entry-level competency in basic and advanced life support theory, inclusive of scene safety issues, field patient assessment, field patient management with continuous field monitoring, radio communication skills, basic and advanced life support psychomotor skills and field transportation issues.

This revised PHRN/ECRN curriculum redefines the scope of responsibility of the PHRN/ECRN and redirects the basic information to a pre-hospital environment. PHRNs function under medical control authorization in a pre-hospital environment, working in conjunction with other pre-hospital practitioners to completely and emergently care for the patient. A critical intent of this revised curriculum is to have the registered nurse integrate pathophysiological principles with patient assessment findings to formulate a field impression, leading to the implementation of a treatment plan utilizing the Prehospital System Protocols. The ECRN will use some of these same principles to guide pre-hospital providers from a hospital setting.

The PHRN/ECRN curriculum is designed to address topics pertinent to the pre-hospital emergency care of the critically ill and injured patient and reflects the current objectives of the National Standard Curriculum as identified by the National Highway Traffic Safety Association.

The practice of a PHRN requires a unique body of knowledge, incorporating nursing knowledge with pre-hospital emergency medical care. PHRNs need to adhere to established standards of practice in addition to the application of a specific body of emergency medical services knowledge and psychomotor skills that are dynamic over time.

PHRN/ECRN

For Region 2 EMS systems and hospitals only.

September 17 & 18, 2012

or

September 19 & 20, 2012

9am - 5pm
