

## Continuing Education QUIZ (1.0 hours CEU)

Name: \_\_\_\_\_

Address: \_\_\_\_\_

City: \_\_\_\_\_ State: \_\_\_\_\_ Zip Code: \_\_\_\_\_

Email: \_\_\_\_\_

### How Much Force is Required to Dislodge an Alternate Airway?

1) Securing the endotracheal tube (ETT) is key to preventing inadvertent airway dislodgement.

- True
- False

2) Based on the cadaver selection criteria, which of the following is **NOT** a reason for exclusion:

- Being less than 18 years of age
- Having a chronic respiratory condition
- Having been embalmed
- Having a tracheostomy

3) Which of the following was **NOT** a reason for using Curasilk cloth adhesive tape?

- There are no commercial tube holders recommended for the tested alternate airways
- Common commercial tube holders did not fit or securely hold the alternate airways
- Commercial tube holders designed for use with alternate airways were too expensive
- Tape was found to be superior to many commercial tube holders in a previous study

4) In the Lillehei technique, tape is applied circumferentially around the head and:

- The free end split into three pieces
- The free end secured with modified Velcro tape
- The free end split into halves
- The free end secured without splitting

5) Prior studies indicate that ETT dislodgement occurs with as little as \_\_\_\_\_ vertical movement:

- 1.0mm
- 1.0cm
- 2.0mm
- 2.0cm

6) According to Table 2, list the airway tubes from the most to least secure.

- ETT, King LT, LMA, ETC
- King LT, ETT, LMA, ETC
- ETC, LMA, King LT, ETT
- ETC, LMA, ETT, King LT

7) The airway balloon with the largest volume required the least force for dislodgement.

- True
- False

8) Which of the following is considered a limitation for this study?

- Sample size
- Time
- Expense
- Equipment
