Address: \_\_\_\_\_

City: \_\_\_\_\_ State: \_\_\_\_\_ Zip Code: \_\_\_\_\_

Email: \_\_\_\_\_

### Time Cost of Pre-hospital Intubation and Intravenous Access in Trauma Patients

- 1) The average on-scene time for all runs included in the study was which of the following?
  - 5 minutes
  - 10 minutes
  - 15 minutes
  - 20 minutes
  
- 2) Performing EACH procedure on scene increased the on-scene time by how many minutes?
  - 1 minute
  - 2 minutes
  - 3 minutes
  - 4 minutes
  - 5 minutes
  
- 3) What is the most important consideration in determining whether to perform procedures on scene?
  - If life-saving maneuvers in the field increase the likelihood of survival, they should be performed.
  - If procedures increase mortality by delaying definitive care, they should be avoided.
  - Each situation needs to be considered on a case by case basis taking in consideration the transport time to the hospital
  - A and B
  - A, B and C
  
- 4) Since the study found that initiating IV access on scene increased the on-scene time by 5 minutes, this procedure should not be performed on trauma patients
  - True
  - False
  
- 5) This study measured the time requirements for each procedure using direct observation by a trained researcher
  - True
  - False
