

Continuing Education QUIZ (1.0 hour CEU)

Name: _____

Address: _____

City: _____ State: _____ Zip Code: _____

Email: _____

Socioeconomic Status is Associated with Provision of Bystander Cardiopulmonary Resuscitation

- 1) All of the following were used to assess socioeconomic status (SES) **EXCEPT**:
 - Tax-assessed value of the location in which the arrest took place
 - The patient's own financial characteristics and assets
 - Neighborhood-level characteristics such as latitude and longitude
 - Community-level characteristics such as college education and employment

- 2) Which of the following was an outcome of interest for the study?
 - Percent of patients discharge from the hospital
 - Percent of patients receiving at least one full minute of CPR being performed
 - The provision of bystander CPR without dispatched assistance

- 3) When assessed property value was greater than \$204,000, the adjusted odd ratio for patients receiving bystander CPR without dispatched assistance was statistically significant ($p < 0.001$)
 - True
 - False

- 4) What was considered the gold standard for determining of bystander CPR?
 - Review of dispatch tape
 - Eyewitness accounts
 - Written reports
 - EMS/First Responders documentation of the events

- 5) This study concluded which of the following?
 - Patients in cardiac arrest in public locations are more likely to receive bystander CPR than in private residences
 - Patients who had early bystander CPR had better outcomes from the hospital
 - Tax-assessed valuation is a precise predictor of bystander CPR provision
 - Dispatcher directed CPR is of little or no value
